Career Objective

Passionate Computer Science student with internship experience in AI/ML. Skilled in Python, data analysis, and full-stack development. Seeking a challenging role to contribute to tech-driven solutions and grow as an AI/ML engineer.

Education

B.Tech in Computer Science Engineering

Expected May 2026

JNTUH Sultanpur

CGPA: 8.05/10

Intermediate (MPC)

2018 – 2020

CV Raman College

Percentage: 97.3%

SSC

2018

Little Scholars Grammar School

GPA: 8.8

Internship Experience

Artificial Intelligence Intern

1Stop.AI, Remote/Online

May 2025 – June 2025

Completed a 3-month intensive AI internship focused on real-time problem-solving using AI agents and machine learning tools. Gained hands-on experience in designing and developing AI-based solutions using algorithms for classification, detection, and optimization. Built projects using TensorFlow, including:

Object Detection System – identified real-world objects in images using deep learning models.

Landmark Detection Model – detected key facial features and image points using convolutional neural networks.

Developed foundational understanding of generative AI, including prompt engineering and basic use cases. Collaborated in live sessions and query-based learning for project explanation and deployment concepts.

Data Analytics (ML tools) Intern

YBI Foundation (Sep 2024)

Completed a 1-month internship focused on machine learning tools and libraries including Scikit-learn, Numpy, Pandas, Matplotlib. Gained practical knowledge in data preprocessing, visualization and model building techniques.

Developed a *handwritten digit prediction* project using supervised learning algorithms to classify digits accurately.

Technical Skills

- **Languages:** Python, SQL, HTML, CSS ,JavaScript
- **Tools:** REST API, Git, GitHub, Jupyter, VS Code
- **Libraries:** Flask, ReactJS , Pandas, NumPy, Tensor-Flow, Scikit-learn
- **Concepts:** DSA,Machine Learning, AI, OOPS,DBMS

Soft Skills

Teamwork, Communication, Problem solving, Leadership, Time management, Adaptability, Critical thinking.

Projects

Online Voting System

Python-Flask, MySQL ,HTML, CSS

Human-Centered Electronic Voting System (HCEVS), Designed and developed a secure, user-friendly e-voting platform with accessibility features, and OTP-based authentication. Focused on improving voter experience and inclusivity using principles of human-computer interaction.

Object Detection using TensorFlow

TensorFlow, Python

Developed an object detection model using a pre-trained Tensorflow model for identifying multiple objects in realtime. Performed image annotation,model training, and evaluation using labeled datasets.

Handwritten Digit Classification

Python , Numpy, Scikit-learn, Matplotlib

Built a machine learning model to recognize handwritten digits using the sklearn datasets.Achieved 99% accuracy using ML models with evaluation metrics and visualization.

Certifications

- Data Analysis and ML – YBI Foundation
- AI Internship – 1Stop
- Generative AI 101 - Build the AI Edge for 2026 - GUVI x HCL (Oct 2025)
- Career Guidance Workshop - Brainic (2025)
- Participated in AINCAT 2025 by Naukri Campus(Career Aptitude)
